DEHN goes to Sweden – first public appearance at ELFACK 2023

A failure of sensitive, networked technology, whether in industry, infrastructure or even in residential and office buildings, is unacceptable and often has serious consequences. DEHN, one of the world's leading suppliers of surge protection, lightning protection, earthing and safety equipment, offers protection solutions for industry, photovoltaic systems, e-mobility charging infrastructure, energy storage systems, LED lighting, railway infrastructure or even residential and office buildings, for example – in tailor-made fashion to meet all different requirements. "Mobilising electrification and digitalisation for a sustainable society", is the slogan for this year's ELFACK, one of the most important trade fairs in northern Europe for energy and electrification, which is taking place from 9 to 12 May 2023 in Gothenburg. Accordingly, on the occasion of the first public appearance of DEHN Sverige at stand G00:40, DEHN will show how the challenges described can be solved easily and safely.

With customer-focused lightning and surge protection solutions, new products with ACI technology or push-in technology, telescopic air-termination rods and much more, DEHN makes the most diverse applications safe and the installation of the protection components easy and convenient.

In order to serve the Scandinavian market even better, DEHN founded its own sales company in Sweden, DEHN Sverige AB, on 1 April 2023. Visitors to ELFACK can expect information on products, protection solutions, seminars, risk analysis as well as engineering and testing services. The extensive specialist knowledge and experience of our experts on site help in the search for suitable, future-proof protection solutions or even in optimising existing solutions.
